

QUIZ

1. Renewable energies produce less gas with greenhouse effect than fossil energy.

- True
- False

2. What's the name for the renewable energy produced from the heat of the ground?

- A. Wind energy.
- B. Solar energy.
- C. Geothermal energy

3. Observing traffic jams, we can talk about noise and visual pollution.

- True
- False

4. Cars reject:

- A. Air.
- B. Gas with greenhouse effect.
- C. Papers.

5. If I ride an electric bike, I use a soft transport.

- True
- False

6. Why is it interesting to use soft transports?

(several possible answers)

- A. Because I do some sport without thinking about it.
- B. Because I reduce the gas emissions with greenhouse effect for my displacements.
- C. Because I can arrive late at school without being told of.

7. The factory of Tangier in Morocco:

- A. Reject wastewater.
- B. Doesn't care about the environment.
- C. Carry out the treatment of wastewater before rejecting it.

8. The untreated wastewater which is rejected into the rivers does not affect my health.

- True
- False

9. The electric car allows making very great displacements, as the diesel or gasoline cars.

- True
- False

10. The label "energy" allows knowing:

- A. If the piles are discharged.
- B. If the car is charged.
- C. If the car emits more or less gas with greenhouse effect.

QUIZ

ANSWERS

- 1. True.** They produce gases with greenhouse effect but in less quantity compared to non-renewable energies, like fossil energy.
- 2. Answer C.** Geothermal energy “Geo” echoes to the ground and “thermal” to the temperature.
- 3. True.** What obstructs the sight or hearing can be considered as pollution (different from the production of gas with greenhouse effect).
- 4. Answer B.** Cars reject gas with greenhouse effect.
- 5. False.** A soft transport is a means of transport without engine!
- 6. Answers A and B.** Because I do some sport without thinking about it and because I reduce the gas emissions with greenhouse effect for my displacements. “Soft” doesn’t mean “Slow”, so that’s not an excuse to be late!
- 7. Answer C.** The factory of Tangier in Morocco carries out the treatment of wastewater before rejecting it. The objective is to reduce as much as possible its environmental impact.
- 8. False.** Many diseases can start after the absorption of contaminated water.
- 9. False,** but the engineers of auto industry improve the performances of the electric vehicles compared to the vehicles with gasoline or diesel! They initially developed town electric cars, 85% of displacements being shorter than 65 km.
- 10. Answer C.** The label “energy” allows knowing if the car emits more or less gas with greenhouse effect.
